COM
hand-held transmitters

**Comfortable operation
of visual and
sun protection**

**ONE DESIGN,
FIVE MODELS,
COUNTLESS FUNCTIONS**

e l e r o

Enhance the comfort of your home

Be it roller shutters, blinds, awnings or screens: thanks to automation with elero products you can operate and control your visual or sun protection systems without expending any energy. Simply at the touch of a button on the radio-controlled hand-held transmitter.

The new generation of COM hand-held transmitters is convincing thanks to the clear, modern design and ergonomic user-friendly structure.

Bidirectional radio technology

All the COM hand-held transmitters utilise a bidirectional radio system. As a result signals are received and processed reliably. The drives securely forward these signals thanks to a true routing function.

The COM family: the right hand-held transmitter for every application

MonoCom

Single-channel hand-held transmitter

MonoCom Slide

Single-channel hand-held transmitter with slider

LumeroCom

Single-channel hand-held transmitter with manual/automatic operation switch

VarioCom

6-channel hand-held transmitter with manual/automatic operation switch

VarioCom Slide

6-channel hand-held transmitter with slider and manual/automatic operation switch

Single-channel

With the single-channel hand-held transmitter you can operate one blind individually or several blinds jointly as one group.

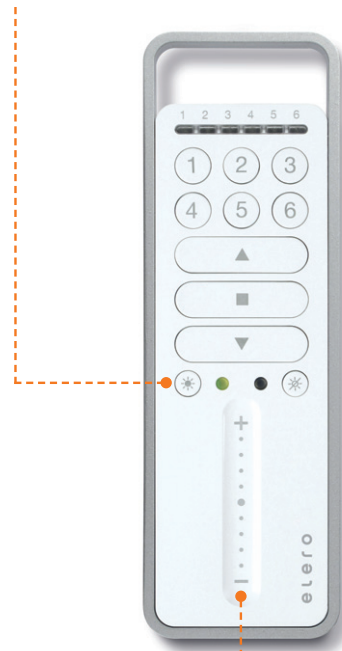

6-channel

With the 6-channel hand-held transmitter as many as 6 units may be operated individually, in groups or centrally.

Manual/automatic operation switch

In combination with automatic devices, roller shutters and sun protection can be moved in line with time and/or sun protection commands. This function may be activated and deactivated on the hand-held transmitter.

Slider function

Using the slider it is possible to position the angle of slats on your blinds precisely. Moreover, patio lighting can be dimmed continuously or the patio heater adjusted if these are fitted with suitable elero radio receivers.
